

Argentina building bluetooth low energy systems

Overview

This is the code repository for Building Bluetooth Low Energy Systems, published by Packt. It contains all the supporting project files necessary to work through the book from start to finish.

Bluetooth Low Energy (BLE) is a Wireless Personal Area network technology aimed at novel applications for smart devices. High-tech BLE profiles.

Building Bluetooth Low Energy Systems

The book is for developers and enthusiasts who are passionate about learning Bluetooth Low Energy technologies and want to add new features and services to their new or existing products. They should be familiar with programming languages such as Swift, Java, and JavaScript.

A Comprehensive Study of Bluetooth Low Energy

With the Bluetooth protocol being enabled with smarter processing and lower energy consumption to create the Bluetooth Low Energy (BLE) segment of peripherals, the focus of this research

You will learn to implement customized projects for Peripheral/Central communication, BLE Beacons, indoor navigation using triangulation, and the Internet gateway for Bluetooth Low Energy Personal Network, all using various code samples and ...

Building Bluetooth Low Energy Systems: , Guide books

Build customized Bluetooth Low Energy projects that make your web or mobile apps smarter in terms of networking and communications. Using Android, iOS, and the Web, acquire key skills to harness the power of Bluetooth Low Energy in your IoT applications.

Building Bluetooth Low Energy Systems

The author gives an introduction to the bluetooth technology and guides the user how to build systems. In my case it is android and by the look of it, he gives enough API details to get started (comparable or more than what I found in similar books).
