

Bcd energy Lithuania

Overview

Lithuania is a net energy importer. In 2019 Lithuania used around 11.4 TWh of electricity after producing just 3.6 TWh. Systematic diversification of energy imports and resources is Lithuania's key energy strategy. Long-term aims were defined in the National Energy Independence strategy in 2012 by Lietuvos Seimas. It was estimated that stra.

Lithuania will use backup batteries after leaving BRELL

3 · Within 3 years, the republic will have to use 200 MW batteries to balance the country's energy system. The relevant amendments to the law on electric power industry were adopted by the Seimas today. The innovations will enter into force on January 17, 2025, less than a month before the expiration of the agreement on parallel operation of the BRELL power systems.
