## Cert systems inc Belarus

---

### CERT Systems

CERT Systems is transforming the way the world makes its most important chemicals. While today, most chemicals are made from fossil fuels, CERT Systems is using carbon dioxide emissions and renewable electricity to synthesize chemical building blocks and clean fuels.

### CERT Systems Company Profile , Management and Employees List

CERT Systems Profile and History. At CERT, we focus on the design and optimization of catalysts on our cathodes and anodes which has enabled our system to convert CO2 at an extremely ...

### CERT Systems Inc

CERT Systems Inc - CERT's electrochemical CO2 conversion technology produces fuels and chemical feedstocks using only water and electricity. Our technology provides an additional revenue stream by tra

### CERT Systems Company Profile , Management and Employees ...

CERT Systems Profile and History. At CERT, we focus on the design and optimization of catalysts on our cathodes and anodes which has enabled our system to convert CO2 at an extremely

efficient rate. Combined with advanced cell design and fabrication, CERT have created a compact and scalable system ready to tackle the world's carbon problem.

### CERT Systems , Breakthrough Energy

CERT Systems Inc. has developed an electrochemical process that uses only water and electricity to convert captured carbon dioxide into basic chemicals that can be used to make everyday products including green chemicals, fuels, and plastics

### Fellows Project CERT Systems Inc.

CERT Systems Inc. has developed an electrochemical process that converts captured carbon dioxide into basic chemicals. Unlike many carbon utilization approaches which require highly-purified CO2 gas, CERT Systems' process can directly use the CO2 captured in liquid media, eliminating the majority of energy costs associated with direct air

### About - CERT Systems

CERT's team has decades of experience in cleantech innovation, bringing together experts in electrochemistry, materials science, and engineering to scale and advance its CO 2 electrolysis process.
