This project is designed to support the Commonwealth of Dominica in developing and integrating clean, sustainable and low-cost energy. Through this \$38.5 million project, a new robust transmission network will be built to withstand natural ...

## The Quest for Renewable Energy in Dominica , DCBIU

A new programme from the European Union has also been announced which will support Dominica's renewable energy sector through a multitude of ways. One of its aims is to render the country's international airport energy-independent and disaster-resilient by installing a solar power plant within the airport.

## Renewable Energy

In 2020, petroleum gas was the most imported product in Dominica with the majority of it coming from the US, according to the OEC. Majority of energy production on the island comes from imported fossil fuels (63%); renewable energy produced on the island provides a degree of self-sufficiency that is not contingent on international markets.

### ESS

## Energy Snapshot Dominica

energy development in Dominica. Few policies currently support renewable energy development, but none inhibit them. Difficulties associated with acquiring adequate land for wind and solar projects, and challenges related to Dominica's geographical, topographical, and transportation issues, do create some obstacles.
