

Energia fotovoltaica off grid French Southern Territories

Overview

La principale différence entre off-grid et autoconsommation réside dans la consommation qui est faite de l'énergie produite.

France is aiming to increase its solar PV capacity from 11.5 GW in March 2021 to 23 GW by the end of 2023. The country offers for small-scale solar PV up to 100 kWp on rooftops for self-consumption, with a specific grid tariff for collective users and exemption from the domestic tax on electricity for projects under 1 MW. However, a proposal to reduce solar PV subsidies for ongoing projects until 2030 has created controversy, affecting the sector's growth.

Off-grid et solaire

Dans un système reposant sur l'off-grid, toute l'énergie produite est redirigée vers la maison équipée. Le système électrique ainsi créé alimente directement l'habitation et, en cas de surplus de production d'énergie, celle-ci est stockée dans des batteries solaires qui permettent d'alimenter les équipements électriques
