Russia Energy Survey - Analysis

Because of the Russian Federation's role as a key oil and gas exporter, the Russian energy sector is of key importance to the country's economic success, as well as to world energy markets. Reforms are essential to enable Russia's energy sector to keep pace with domestic energy demand growth in a period of strong GDP growth, while yet seizing export opportunities.

Energy Fact Sheet: Why does Russian oil and gas matter?

Russia has an estimated 6.9 million bpd of refining capacity, and produces a substantial amount of oil products, such as gasoline and diesel. Russian companies have spent the last decade investing heavily in primary and secondary refining capacity in order to take advantage of favourable government taxation, as well as growing global diesel demand.

Why is Russia targeting Ukraine's energy grid with missile attacks?

It is Russia's second major aerial attack on Ukraine's power grid in less than two weeks as well as the 11th major strike on the Ukrainian energy system since March.
