

Heard and McDonald Islands baterias de litios

Overview

Approximately 1700 km (Perth) and 4100 km from the nearest major city. The islands are part of the "Antipodes Islands" group.

Heard Island and McDonald Islands (HIMI) were first discovered in 1947. In 1997, the islands were designated as a World Heritage Site. The islands are approximately 1600 km from the nearest major city and 1000 km from the nearest major airport. The islands are approximately 3700 km from the nearest major city and 80% of the islands are covered in ice.

The islands are part of the that includes several islands. In this cold climate, plant life is mainly limited to grasses, lichens, and . Low plant diversity reflects the islands' isolation, small size, severe climate, the short, cool growing season and, for Heard Island, substantial permanent ice cover. The main environmental deter.

Heard Island and McDonald Islands

Heard Island and the McDonald Islands are free from introduced predators and provide crucial breeding habitat in the middle of the vast

Southern Ocean for a range of birds. The surrounding waters are important feeding areas for birds and some scavenging species also derive sustenance from their cohabitants on the islands.

McDonald Islands

The McDonald Islands comprise three islands: McDonald Island, Flat Island (which later merged with McDonald Island) and Meyer Rock. The islands are mostly composed of phonolitic low-silica pumice, dikes and lava domes, and sit atop a submarine plateau, the Kerguelen Plateau. They are located about 75 km from Heard Island.

Heard and McDonald Islands - Geotourism Guide

Heard Island and McDonald Islands are located in the Southern Ocean, approximately 1,700 km from the Antarctic continent and 4,100 km south-west of Perth. As the only volcanically active subantarctic islands they 'open a window into the earth', thus providing the opportunity to observe ongoing geomorphic processes and glacial dynamics.
