Substantial support for Jersey offshore wind farm, survey finds

Those who responded supported the scheme for the production of renewable energy, energy independence, taking action on climate change and reducing carbon emissions, income generation and the

'There's a real appetite to be more energy ...

AS the project to construct a brand-new wind farm off the Brittany coast, little more than 20 miles from Jersey, moves into its final year, the head of Jersey Electricity has re-emphasised

'There's a real appetite to be more energy-independent'

AS the project to construct a brand-new wind farm off the Brittany coast, little more than 20 miles from Jersey, moves into its final year, the head of Jersey Electricity has re-emphasised

Offshore wind power

The Government's Future Economy Programme identified renewable energy as a potential growth enabler to address long term challenges of demographic shifts and low productivity. In addition to economic growth, other identified benefits include enhanced energy independence and potential long-term price stabilisation.

Economic analysis regarding the economic

to explore the economic potential of renewable energy generation for Jersey under a range of generation scenarios. To aid ongoing Ministerial discussions, this document shows the analysis for a 1,000 MW wind farm and provides information about the underlying methodology. It is also important to emphasise it is intended as initial
