

Russia genexus grid conditions

Russia genexus grid conditions

Materials

Orders, searches, and conditions relative to the data shown. Upon a given Panel or Work With for Smart Devices, how can we specify the criteria by which we want to order the information to be deployed on a grid? How do we specify search criteria, advanced filters and other conditions?

Genexus Sub-level Grid in Transaction

When you have a two-level Transaction in GeneXus, you are saying that the data in that transaction must be managed as a whole. That's why GeneXus won't let you remove the second level's grid from the Form. What you need to do, if you want to manage the two levels separately, is to have two different transactions, one for each level.

Conditions property , Article

The Conditions property defined is a filter that indicates that the Properties you want to retrieve from the Property table to be loaded in the Grid are those that belong to NeighborhoodId = 1. Although this example shows a Grid in a Web Panel object, it could be a ...

Working with Grids in Web Panels , Article

There's a property called "Conditions" in the window containing the Grid control properties. By

clicking on the combo, an editor will open where you can specify the Boolean ...

Refresh a grid in Genexus Android

To put it simply, let's say I have a checkbox outside the grid: if the checkbox is true, the grid shows all the records, if it's false it has to show only the filtered values. In the ...

Some Considerations on Loading Grids Without a Base Table

A Warning is displayed, indicating that our grid doesn't have a base table and we don't have any Load command declared within the Load event. This Warning also appears in the output. ...

Conditional Orders and Filters , Article

In GeneXus it is possible to condition both the filters (usually known as filter conditions or constraints) and the orders indicated in the objects or in the Grid controls, using the WHEN clause. This will allow having a better performance in the queries that include several search criteria, since it is possible to coordinate the search order

Conditional Orders and Filters , Article

In GeneXus it is possible to condition both the filters (usually known as filter conditions or constraints) and the orders indicated in the objects or in the Grid controls, using ...

the Load event of the grid and not the generic one, which only ...

we add a variable & attractions to the grid, and calculate it every time a line is going to be loaded; that is, in the Load event of the grid named Grid2. Why is it not necessary to condition this ...

the Load event of the grid and not the generic one, which only ...

we add a variable & attractions to the grid, and calculate it every time a line is going to be loaded; that is, in the Load event of the grid named Grid2. Why is it not necessary to condition this formula to count only the

Orders and Filters in Grids of Panels , Article

After applying the Work With pattern in this Transaction, GeneXus offers by default on the List node an order, search and filter conditions for the Grid control based on the ...
