The Sendai Microgrid Operational Experience in the Aftermath ...

This case study describes the Sendai Microgrid, on the located campus of Tohoku Fukushi University in Sendai City in Tohoku the district in Japan, and focusses on its operation in the aftermath of the

Microgrids: Experiences, barriers and success factors

However, exceptions to size do exist, as seen in the Sendai case, which has a generation capacity of 800 kW, yet has transitioned from a demonstration to commercial microgrid by proving it can effectively transition to island mode during the Tohoku Earthquake by utilizing the Multi-Power Quality Microgrid System [19].

Sendai Microgrid

Perhaps the most well-known microgrid demonstration on this planet, The Sendai Microgrid Project was one of the four major New Energy and Industrial Technology Development

Organization (NEDO) ones carried out in Japan between 2005 and 2008.

Behavior of the Sendai Microgrid during and after the 311 Great ...

Abstract: The Multiple Power Quality Supply System as the Sendai microgrid is designed as an ideal power supply system that can simultaneously provide services with multiple power quality levels. The microgrid was developed by NTT Facilities and was installed on the campus of Tohoku Fukushi University in Sendai City, Japan.

The island operation mode of the microgrid can ensure the safe and reliable operation of equipment and units during severe conditions or power outages and ensure rapid grid ...

Micro Grids Can Solve Macro Problems--Part 2 , GlobalSpec

Microgrids face technical challenges that include connecting to the utility grid and combining different generation sources and loads within an islanded microgrid.

Sendai Microgrid

The Sendai Microgrid has different categories of loads based on based on the quality of power they require. This allows much higher reliability to critical needs. It can supply various classes of power quality within the microgrid, seen below.

Case Studies of Smart Community Demonstration Project

Despite the extreme devastation, the Sendai Microgrid resumed supplying power and heat to customers after a short interruption, proving its effectiveness. This case study is an analysis of the operations of the Sendai Microgrid in the aftermath of the earthquake and will provide useful lessons for all microgrid operators and users around the world.
