L'invention d'une éolienne de toit domestique et sans

La technologie brevetée par Aeromine s'appuie sur un aérodynamisme semblable à celui des ailes d'une voiture de course pour capter et amplifier le flux d'air de chaque bâtiment. Un système complet se compose de 20 à 40 éoliennes, installées sur les bords des toits des bâtiments, face aux vents prédominants en fonction des régions.

Aeromine 500, une éolienne de toiture qui produit 50 % d

Avec sa solution innovante, la start-up américaine Aeromine Technologies veut changer cette situation. Son invention consiste en une éolienne sans pâles qui, en plus d'être compacte et immobile, promet un rendement comparable à celui d'une installation photovoltaïque.

Aeromine, la révolution eolice è arrivata: sui tetti turbine senza pale

Merito di Aeromine Technologies, una startup che abbiamo seguito fin dall'inizio, e le sue innovative turbine eoliche senza pale da installare sui tetti degli edifici. Queste "piattaforme di raccolta del vento", come le definisce l'azienda, sono in grado di generare elettricità sfruttando l'aerodinamica dell'edificio stesso, senza

Aeromine Technologies

Aeromine's patented aerodynamic design captures and amplifies building airflow. When wind passes through the airfoils, a low pressure is generated, drawing air up through the intake and internal generator. Aeromine units have no visible moving parts. They run quietly, require little maintenance, and have minimal impact on wildlife.

Product & Technology

Aeromine systems can be remotely monitored and controlled, enabling individual units or full system operational changes as well as seamless integration with other building systems. Cloud services use a digital twin and regional weather data to constantly check the installation's reliability and performance.
