And if I could add an air-conditioning unit to keep the machines from baking in the sun (and function as a dehumidifier at the same time), then all the better. As it turned out, the project was a lot easier than I expected. Here's how I did it. There are many ways to skin a cat, and even more ways. Shipping containers are known for their durability and versatility, but without proper climate control, they can be vulnerable to extreme temperatures and humidity. Heating, ventilation, and air conditioning, or more commonly called HVAC, modifications make it possible to store sensitive items. It's one of the 20' containers from the BRC Storage program. Pretty sure they're 8' wide and tall, so that works out to 160 sq ft / 1280 cubic feet. Normal AC size guides suggest about 6k BTUs for 150-250 sq ft. So I'm thinking 10k BTUs should suffice for playa conditions. Does that sound right to. In this guide, we'll walk you through the step-by-step process of installing an air conditioning system in your shipping container, ensuring that you stay cool even in the hottest climates.
