

Straw turns into solar container

Overview

In a now-viral video by @plantingwithe, the creator shows how to transform everyday strawberry clamshell packaging into practical mini greenhouses for seedlings. The idea is simple but wildly effective. If you've been tossing out those plastic strawberry containers at the end of the week without a second thought, stop ASAP! Put your garbage to good use with this genius TikTok hack. A creator just revealed a genius way to reuse these containers, and gardening fans are completely obsessed. In a. One method that you can utilize to obtain water in a survival situation is by making a solar still. The key word here is CONDENSATION. I'm sure you have made yourself a glass of a cool drink of some type on a hot day, and the outside of the glass gets droplets of water on it. That's condensation. Turning a straw into a water-resistant container is an old-school backpacking trick. These can be used to hold spices, dry tinder, medication or anything else. Here I will go over 4 different ways to make solar stills, from very easy plastic bottle solar stills to ones you can make at home. Also read: How to filter water in the wild How Does a Solar Still Work?

Solar distillers work by using heat from sunlight to evaporate water. Impurities are left. It's a water purification device that uses the power of the sun to turn impure water into clean, drinkable water. And the best part?

You can make one at home using just a few basic supplies. This DIY solar still experiment is a fantastic way to teach kids about the water cycle, especially. Ever think of turning them into a solar air heater?

Let's give that a try! Solar Air Heater DIY - Homemade STEEL CAN Air Heater! - Quickview w/closeups Boost this thread! - Turn a bunch of aluminum or steel cans into a solar air heater. Ever think of turning them into a solar air heater?
