

System furnace solar container tank

Overview

With this tank you can easily expand your solar heating system at any time without new equipment! The solar heats the domestic hot water using an internal bottom heat exchanger. The Pre-Heated water then enters a second hot water heater or on demand water heater to top. Solar water tanks are used in for solar heating to act as buffer tanks. When the sun is shining, the water will be heated in the solar storage tank for later use, most commonly in the evening. Most solar thermal tanks contain a heat exchanger to separate the potable water from the solar heating. Experience the durability, customization, and engineering excellence of StorMaxx™ Solar hot water storage tanks from SunMaxx, the industry's leading solar storage solution.
