## Overview

---

Dive into the vast aquatic landscape of Guinea-Bissau through compelling data visualization. Uncover the intricate network of rivers, lakes, and groundwater reserves, empowering sustainable water management and conservation. Guinea-Bissau, often called the "Venice of West Africa" for its intricate network of rivers and estuaries [2], faces an ironic crisis: abundant water resources but limited access to reliable storage. With 58% forest cover and 300km of coastline [7], this nation's water management puzzle reveals. "Our two main rivers, the Rio Geba and the Rio Corubal, are shared with Senegal and Guinea. 80% of the drinking water available to the population of Bissau comes from a shared aquifer, the Bassin Aquifère Sénégalo Mauritanien. Cooperation with our neighbouring countries is therefore crucial". Water storage has long been a pressing concern in Guinea-Bissau, a country characterized by its tropical climate and seasonal rainfall. As the population continues to grow and agricultural demands increase, the need for reliable and efficient water storage solutions has never been greater. One. Notes: Years with missing data left empty. Water use can include water used and then returned to its source (renewable resource). See world total and list by country. Click to view individual basin. Total annual estimated cost to address all water-related challenges: \$177,624,218.00 For more about this data, see information on WRI's Achieving Abundance dataset here. As reported by organizations on the Hub. Guinea-Bissau, one of the world's poorest and most. African Tank Systems is an industry leader of custom designed bulk storage tanks and systems. What is Water storage?

Water Storage is a broad term referring to the storage of both potable (safe to drink, drinkable) and non potable (not fit for consumption) water. Many African countries face water.
